

Helper scripts for the Fablicator Firmware

These scripts automate a few tasks such as resetting and updating the firmware, and opening the per-printer calibration.

Double-clicking each of the .bat files will run the script.

Overview of the scripts

FetchUpdate.bat

Updates your firmware to the latest firmware in our Marlin Firmware repository.

OpenConfiguration.bat

Opens the Calibration.h file in Atom Text editor and opens the Marlin firmware directory.

Calibration.h is where the per-printer calibration is stored.

ResetRoot.bat

Resets the current directory to it's default. **The per-printer Calibration is not reset to default.**
